Profile

Senior Product Designer with over 5 years of experience in designing payments, checkout, and identity verification flows for a fintech SaaS platform used by enterprise clients across multiple markets and currencies. I own design end to end - from discovery through delivery - working directly with engineering and data that drive measurable conversion gains. Comfortable operating inside regulatory and security constraints (KYC, multi-currency, multi-provider payment routing) while shipping interfaces that measurably improve conversion and are user-first.

Experience

Soltech - Sept 2021 - Present

One continuous role and contract with Soltech: progressively assigned to different internal ventures and client accounts, with a promotion to Senior Product Designer in January 2026.

Senior Product Designer | Fluid - fintech payments platform

Jan 2026 - Present

- Take full design ownership from ideation to execution: discovery, flow architecture, prototyping, delivery - for a payment platform used by enterprise clients across multiple markets, partnering directly with engineering and data teams to ship and iterate.
- Take full design ownership on high-stakes transactional surfaces (payment method selection, identity verification, error recovery), balancing conversion goals against security and regulatory requirements - the core trade-off in consumer financial products.
- Translate ambiguous, multi-stakeholder requirements into simple and scalable interface decisions. Validate design decision post-launch against completion-rate and conversion data, closing the loop between design intent and measurable outcome.
- Prototype and ship functional UI using AI-assisted ("vibe coding") workflows with Claude Code, closing the gap between design intent and working code.

Product Designer | Fluid - fintech payments platform

Feb 2023 - January 2026

- Designed the end-to-end interface and UX for a checkout experience used across multiple markets, increasing average conversion rates to over 5% as well as acceptance rate by over 10% per customer.

- Designed a scalable and flexible interface that is controlled by a theming system that allows clients to run a fully customized front-end experience.
- Designed multi-currency and multi-provider payment flows that operate within strict regulatory and security constraints, without sacrificing usability and increasing deposit-per-user rate by 25%.
- Extensive collaboration with product, engineering, data science, and client-success teams to develop a user-first product as well as implementing client feedback.

Product & Graphic Designer | Soltech - multi-client agency work

May 2022 - Feb 2023

- Designed for multiple concurrent client accounts spanning different industries, owning client meetings, feedback cycles and delivery timelines directly
- Delivered both product/Ui design and supporting marketing and brand materials, adapting quickly across client needs and visual identities.

Product & Graphic Designer | Soltech - client account

Sep 2021 - May 2022

- Designed interface and marketing materials for a consumer entertainment brand, working across multiple internal teams to meet deadlines ahead of high-profile launch that was later acquired in 2022.

Skills

Design and Product

Product Design | UI | UX | Interaction Design | Rapid Prototyping | Data Visualisation | Design System | Payments & Checkout UX | Cross-functional Collaboration

Tools

Figma | Claude | ChatGPT | Framer | Adobe XD | Illustrator | Photoshop | InDesign | AfterEffects | Premiere Pro | Procreate | Squarespace

Education

Bachelor's Degree in Graphic Design

ESADA, Granada - 2017-2021
